

## BDCS undercarriage supports

### FROM SIMPLE ACCESSORY TO CUSTOMIZED SUPPORTING STRUCTURES.

Our simple undercarriage supports have evolved in the two axis mobile versions on rails and in the most recent load-bearing structures with screen changer carriages, hydraulically operated, mounted on recirculating balls ground guides. Each project is tailored to the specific customer request.

This 3-D model refers to a project tailored to the customer's needs. This engineering method ensures the highest accuracy in the calculation of the overall dimensions and a perfect fit in the installation phase.
