## BDVD diverter valves

PRECISE MATERIAL  
DIVERSION,  
SEAMLESS PLANT  
INTEGRATION

### APPLICATIONS

- Processes of granulation

A system for **diverting out of process a part of the wasted polymer produced during start-up or shutdown of various extrusion lines.**

The use of the **diverter valves also extends to the granulation lines equipped with underwater pelletizers**, where the presence of the diverter valve becomes a necessary condition for their smooth operation. Easy to maintain, it can be mounted on different types of plants or become part of a screen changer.

Produced with melt channels from **Ø 30 to Ø 200 mm**, it can, with minimal changes, use the same hydraulic power unit of our screen changers.

## SMART POLYMER DIVERSION FOR EFFICIENT CHANGEOVERS
